EDUCATION

University of Southern California <i>Master of Science in Computer Science</i> GPA: 3.45/4.0 Coursework: Analysis of Algorithms, Web Technologies, Database Systems, Information Retrieval, Applied NLP, Machine Learning, Security Systems	Jan 2024 – Dec 2025 Los Angeles, CA
Symbiosis University of Applied Sciences <i>Bachelor of Technology, Computer Science and Information Technology</i> GPA: 9.23/10.0	Aug 2019 – May 2023 Indore, India

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, SQL, C++, HTML5, CSS3
Frontend: React, Vite, Next.js, Redux, Tailwind CSS, Angular
Backend & APIs: Node.js, Express.js, FastAPI, Django, Django REST Framework, Prisma, REST APIs, GraphQL, WebSockets, JWT, OAuth/SSO
Databases & Data: PostgreSQL, Redis, MySQL, MongoDB, Supabase, data modeling
Cloud & DevOps: GCP (Cloud Run, Cloud SQL, GCS), AWS (S3, EC2), Terraform, Docker, Kubernetes, CI/CD, GitHub Actions, Jest, structured logging, Linux, Git
AI Integration: LLMs, Tool Calling, AI Agents, Vercel AI SDK, RAG, LangChain, FAISS, PyTorch, Prompt Engineering, Agentic Workflows, OCR, Cursor, Claude Code

EXPERIENCE

Handshake <i>AI Evaluation Engineer – Agentic Systems (Contract)</i>	Jul 2026 – Present San Francisco, CA (Remote)
- Probe frontier LLM agents across 10+ adversarial trajectories in sandboxed Linux, characterizing failure modes that affect reliability in production - Trace root causes across 4K+ rollout log entries and system state, packaging reproducible evidence bundles with model builds and cited log lines for review	
99 Yards <i>Software Engineer Intern</i>	Jun 2026 – Present New York City, NY (Remote)
- Construct React + Vite features across 4 product domains with 14 reusable TypeScript components and virtualized lists tuned for data-heavy views - Wire a typed Redux API module to the REST layer with normalized caching, optimistic updates, real-time WebSocket chat, and role-gated protected routes - Design 9+ REST endpoints in Node.js + Express + TypeScript over Postgres, with JWT auth, RBAC, and 3 SSO providers verified server-side - Build a provider-agnostic LLM inference layer with streaming and retries, plus server-side Stripe payment intents, transfers, and signed webhooks - Manage GCP infrastructure as code in Terraform, provisioning Cloud Run, Cloud SQL, GCS, and secrets with CI-driven deploys and rollbacks	
USC Information Technology Services <i>Technical Support Lead</i>	Jul 2024 – Dec 2025 Los Angeles, CA
- Led 50+ student assistants, cutting onboarding time by ~30% and issue resolution time by ~25% via structured training programs and technical runbooks - Established standardized incident response procedures and mentorship frameworks adopted across 3 IT support departments - Translated system escalations into clear answers for non-technical faculty, staff, and students, unblocking university operations	
NICT Technologies <i>Software Engineer Intern</i>	Jul 2023 – Dec 2023 Indore, India
- Reduced page load time by ~60% for 35K+ DAU by building a React 18 frontend with code splitting, Suspense boundaries, and virtualized rendering - Developed interactive analytics dashboards using Recharts and custom React hooks, giving product managers real-time visibility into engagement trends - Streamlined release cycles from 2 weeks to 3 days (64% faster) by setting up GitHub Actions CI/CD with Jest, React Testing Library, ESLint, and Docker staging - Optimized throughput for 500+ API calls/min by designing RESTful services with FastAPI and Node.js backed by Redis caching and connection pooling - Mitigated transaction failures by ~33% (saving \$2K+/mth) by containerizing services with Docker, adding health checks, structured logging, and error recovery	

PROJECTS

Syntropy React, TypeScript, Next.js, PostgreSQL, Prisma, Trigger.dev, Liveblocks, Vercel AI SDK	Mar 2026 – Apr 2026
- Architected an AI agent with 8 Zod-validated tool-call schemas and reasoning loop, generating system designs from natural language - Developed CRDT-backed real-time canvas merging AI mutations and concurrent human edits conflict-free, with live cursors and sub-second sync - Engineered a prompt pipeline using live canvas state and chat history as LLM context, persisting specs in a 4-model PostgreSQL schema - Deployed to production with 13 REST endpoints across 6 services, serving 100+ real users at sub-200ms with role-based access control	
DocuChat Python, FastAPI, React, LangChain, FAISS, Hugging Face, Docker	Sep 2025 – Oct 2025
- Constructed a multimodal RAG pipeline with LLMs, FAISS vector search, and shared Sentence Transformers, cutting per-session memory by ~60% - Devised an ingestion pipeline for messy, unstructured inputs (PDF, images), normalizing tables to markdown & OCR-chunking figures for reliable retrieval - Automated context-aware LLM responses using relevance threshold filtering, inline source citations, and LangChain query routing	
WeBudget Next.js, TypeScript, Tailwind CSS, Prisma, Supabase, Inngest	Jun 2025 – Jul 2025
- Implemented a full-stack TypeScript app (Next.js + Supabase) serving 57+ beta users with ~99% uptime and real-time sync across 200+ transactions - Minimized manual intervention by 50% through automated group budget reconciliation workflows using Supabase Edge Functions and Prisma ORM - Constructed an AI-powered receipt OCR and auto-categorization engine with ~93% accuracy using structured prompt chaining and validation layers
